Brief for Assignment 2: Presentation

Assignment Type:	Group Submission and Presentation
Weightage:	25%
Submission Deliverables:	1. PDF Document of Poster via NTULearn 2. Oral Presentation
Due Date:	Week 13, before tutorial

Building on your work from Assignment 1 (source library and problem statement), your group will now develop and pitch an **innovative solution** to a specific challenge within your chosen area.

Your pitch will be delivered **in-class to simulated public and/or private stakeholders**, so your solution must be grounded, feasible, and persuasive to a real-world audience.

Your assignment has TWO components:

Component 1: Poster *(A3 size, submitted as PDF)*

Your group will design a poster that clearly communicates:

- **The problem**: a focused problem statement, either refined from Assignment 1 or a freshly formulated problem statement of a different topic.
- **Innovative solution**: what you are proposing, who it is for, and how it works.
- **Interdisciplinary framing**: how your solution draws on multiple perspectives (STEM, Business/Governance, and social sciences/humanities)
- **Stakeholder relevance**: why someone should care and/or act on this
- Anticipate **stakeholder concerns**: feasibility, cost, ethics, implementation challenges, etc

The poster should be visually clear and self-explanatory; someone unfamiliar with your project should be able to understand your argument from the poster alone.

In addition, submit a **practical mockup** of your proposed solution created with the help of AI tools. This could include, for example: a chatbot prototype, an app interface mockup, or a visual storyboard of a community initiative.

Notes:

- You do not need to print the poster. Prepare it as a PDF for presenting in class.
- While your solution does not have to be entirely AI-driven, it should integrate AI sufficiently to showcase the human-in-the-loop protocol detailed below.

Component 2: In-Class Oral Presentation *(maximum 10 minutes)*

Your group will deliver a live pitch to simulated stakeholders in class. Your pitch should:

- Clearly articulate the **problem and its significance**
- Present your **proposed solution** with enough specificity to be credible
- Your pitch must outline how your proposed idea could be **realistically implemented** in a real-world Singaporean context, considering current infrastructure or policy frameworks

- You must explicitly identify a **human-in-the-loop Protocol**. This is a set of specific criteria defining exactly **when and why a human must override an AI's decision** to prevent systemic harm, data bias, or ethical violations
- Show how your thinking **evolved**: what did you learn, revise, or reframe along the way?

Notes:

- Your group decides how many members present. Not everyone needs to present, but **everyone must attend.** You will not get marks for oral presentation if you do not show up.
- Only cue cards are allowed during presentation. No phones may be used unless approved.
- Be prepared for questions from the floor.

Assessment Rubrics for Assignment 2 (Presentation)

	Exemplary	*Proficient*	*Developing*
Problem Identification	• **Prevalence/significance:** The prevalence and significance of the problem is well-established. • **Scope:** Clearly defines the scope and boundaries of the problem/solution. • **Evidence:** Provides compelling evidence and justification from multiple credible sources.	• **Prevalence/significance:** The prevalence and significance of the problem is somewhat established. • **Scope:** Scope and boundaries of the problem/solution are somewhat defined. • **Evidence:** Provides adequate evidence and justification from credible sources.	• **Prevalence/significance:** The prevalence and significance of the problem is not well-established. • **Scope:** Scope and boundaries of the problem are unclear or poorly defined. • **Evidence:** Evidence and justification for significance is weak or lacking.
Critical Thinking	• **Depth:** The presentation has excellent insight – raises complex questions that shows deeper understanding of the issue. The analysis is relevant and shows depth. • **Course material:** There is an excellent demonstration of understanding and application of course material to analyse key points. • **3-Lens integration:** The proposed idea is convincing and well-justified, and demonstrates thoughtful analysis from STEM, Business/Governance, and Social Sciences/Humanities angles.	• **Depth:** The presentation has some insight – raises questions that lead to further exploration of the issue. The analysis is relevant but lacks depth. • **Course material:** There is some attempt at demonstration of understanding and application of course material to analyse key points. • **3-Lens integration:** The proposed idea is somewhat convincing and well-justified, but the analysis across STEM, Business/Governance, and Social Sciences/Humanities angles lacks depth or integration.	• **Depth:** The presentation lacks insight – raises superficial questions that do not contribute to deeper understanding. The analysis lacks relevance and depth. • **Course material:** Little attempt at demonstration of understanding and application of course material to analyse key points. • **3-Lens integration:** The proposed idea is unconvincing, or not well-justified, with little to no analysis of interdisciplinary perspectives.

Problem Solving	• **Logic:** There is a convincing link between the identified problem and the proposed solution. • **Value-add:** The solution demonstrates significant value over existing solutions. • **HITL:** Identifies an ethically grounded human-in-the-loop protocol with precise criteria • **Mockup:** Mockup is well-constructed; clearly shows key features/ideas of the proposed solution. • **Limits:** Anticipates potential challenges/limitations that reflect depth of thinking.	• **Logic:** The link between the identified problem and the proposed solution is somewhat established. • **Value-add:** The solution has some added value over existing solutions. • **HITL:** Identifies a general need for human oversight but lacks specific, actionable criteria • **Mockup:** Mockup is basic and does not clearly demonstrate key features/ideas. • **Limits:** Anticipates some general challenges/limitations.	• **Logic:** The link between the identified problem and the proposed solution is ambiguous or not adequately established. • **Value-add:** There is little or no value-add over existing solutions. • **HITL:** Superficial or no consideration of accountability protocols • **Mockup:** The mockup is incomplete, confusing, or fails to demonstrate key features/ideas. • **Limits:** Superficial or little consideration of potential challenges/limitations.
Organisation, Presentation and Style	• **Flow:** Content is well-structured, logical, and flow is natural. • **Standalone:** Poster is self-explanatory and sufficient, without excessive unnecessary detail. • **Visuals:** Good use of visuals to enhance content and/or comprehensibility. • **Citations:** All necessary content and visuals are cited.	• **Flow:** Content is somewhat structured and there is some awkwardness in flow. • **Standalone:** Poster is somewhat self-explanatory and/or has some redundancy. • **Visuals:** Visuals are somewhat helpful in enhancing content and/or comprehensibility. • **Citations:** Most content and visuals have citations.	• **Flow:** Content is poorly structured, disjointed, and/or flows poorly. • **Standalone:** Poster is not self-explanatory and/or has much redundancy. • **Visuals:** Visuals are poorly selected and not very helpful in enhancing content and/or comprehensibility. • **Citations:** Most content and visuals lack citations.
Oral Presentation	• **Pitch:** Presentation is highly engaging, appropriately timed (max 10 mins).	• **Pitch:** Presentation is somewhat engaging and appropriately timed.	• **Pitch:** Presentation lacks engagement runs significantly over/under time.

	• **Stakeholder Focus:** Pitch is tailored to relevant stakeholder. • **Evolution:** Clearly explains how the group's thinking evolved over the course of the project.	• **Stakeholder Focus:** Generic classroom presentation style; basic audience awareness. • **Evolution:** Provides some explanation of how thinking evolved over the course of the project.	• **Stakeholder Focus:** Ignores stakeholder context entirely. • **Evolution:** Fails to show how thinking evolved over the course of the project.
